Preamble

1) Introduction

This program is designed to provide a comprehensive and in-depth understanding of the fascinating world of Analytical Chemistry. Through a rigorous academic curriculum and hands-on research experience, we aim to nurture the intellectual curiosity and scientific acumen of our students, preparing them for successful careers in various sectors of the chemical sciences. The M.Sc. (Analytical Chemistry) course is structured to equip students with a strong theoretical foundation, practical skills, and critical thinking abilities necessary to address the challenges and opportunities in the diverse fields of chemistry. Our esteemed faculty members are experts in their respective fields, with a passion for both teaching and research. They are committed to providing a nurturing learning environment, encouraging open discussions, and fostering collaborative research endeavors. Through their mentorship, students will have the opportunity to engage in cutting-edge research projects, pushing the boundaries of scientific knowledge and contributing to the advancement of the chemical sciences.

We envision our M.Sc. (Analytical Chemistry) postgraduates act as catalysts for positive change, equipped to drive innovation, shape industries, and address societal challenges through their expertise in chemistry. Whether your passion lies in research, industry, education, or beyond, our program aims to provide the knowledge and skills necessary to excel in your chosen path.

2) Aims and Objectives

The aims and objectives of M.Sc. (Analytical Chemistry) course are designed to provide students with a well-rounded and advanced education in the field of Analytical chemistry. These goals focus on equipping students with a deep understanding of chemical principles, fostering research and analytical skills, and preparing them for successful careers in various sectors of the chemical sciences. The M.Sc. (Analytical Chemistry) course aims to produce skilled and knowledgeable professionals who can contribute to scientific research, industrial innovation, and the betterment of society through their expertise in Analytical chemistry.

3) Learning Outcomes

The learning outcomes of M.Sc. (Analytical Chemistry) course are designed to equip students with a comprehensive and advanced understanding of the field of chemistry. These learning outcomes reflect the knowledge, skills, and competencies that students are expected to gain upon successful completion of the program.

4) Any other point (if any)

5) Credit Structure of the M.Sc. (Analytical Chemistry) (Sem I, II, III & IV) (Table as per परिशिष्ट-1with sign of HOD and Dean)

PROGRAM OUTLINE 2023-2024

PROGRAMME SPECIFIC OUTCOME (PSOs) :

1. To gain knowledge in chemistry, scrutinize and accomplish solution to problems encountered in the field of research and analysis.

2. To apply the basic knowledge of chemistry to perform various tasks at the workplace to meet global standards.

3. To deduce qualitative and quantitative information using various analytical techniques.

4. To inculcate the aptitude of scientific approach along with analytical reasoning in technologies used in the Industry.

5. To explicit subject knowledge and integrate it in interdisciplinary research .

6. To understand, manage and contribute to solve societal and environmental issues ethically .

7. To exhibit professional work ethics and norms of scientific developments.

8. To develop critical thinking approach toward the scientific problems, analysis, validation and documentation with safety norms and standards.

9. To inculcate analytical thinking, so that students will have an edge for a better future in chemical industries.

10. To imbibe an attitude of lifelong learning so as to thrive in knowledge and skills.

PROGRAM(s)	: M.ScI	SEMESTER	: I						
Course: Mand	atory Course-I		Course Code: (CHEM 501)						
		Course Tit	le: - Physi	cal Chemistry-I					
Teaching Sc	heme				Evaluation Scheme				
Lectures (Hours per week)	Practical (Hours per week)	Tutorial (Hours per week)	Credit	Continuous Assessment (CA) (Marks- 50)	Semester End Examination (Marks- 50)				
04	NA	-	04	50	50				

Learning Objectives:

1.To enable learners to have comprehensive knowledge and understanding of the advanced concepts in reaction kinetics, molecular dynamics and chemical thermodynamics.

To apply the basic knowledge of Physical chemistry to perform various tasks assigned to them at the workplace in industry and academia to meet the job requirements as per global standards.
 Accomplish a solution to problems encountered in the field of research.

Course Outcomes:

- 1. The learners will apply the advanced thermodynamics, Maxwell equation and its applications to ideal gases.
- **2.** The learners evaluate the different theories of chemical kinetics and effect of temperature on reaction rates.
- **3.** The learners will implement the applications of chemical thermodynamics to real gases, solutions, surfaces and their energetics.
- **4.** The learners will understand the applications of operators and Schrodinger equation in the field of quantum Chemistry.
- 5. The learners will evaluate the resting membrane potential by using the concept of bio electrochemistry.
- **6.** The learners will try to accomplish a solution to problems encountered in the field of research.

Semester – I

Physical Chemistry-I

(CHEM501)

Course code- CHEM 501	Unit	Course/Unit Title: Physical Chemistry-I	Credits 04/ [60 L]
	1	Thermodynamics-I	[15L]
	1.1.	State function and exact differentials. Maxwell equations, Maxwell thermodynamic Relations; its significance and applications to ideal gases, Joule Thomson experiment, Joule Thomson coefficient, inversion temperature, Joule Thomson coefficient in terms of van der Waals constants. [8L]	
	1.2.	Third law of Thermodynamics, Entropy change for a phase transition, absolute entropies, determination of absolute entropies in terms of heat capacity, standard molar entropies and their dependence on molecular mass and molecular structure, residual entropy [Ref 2 and 1,10,11,12 17] [7L]	
	2	Quantum Chemistry	[15L]
	2.1.	Classical Mechanics, failure of classical mechanics: Need for Quantum Mechanics.	
	2.2	Particle waves and Schrödinger wave equation, wave functions, properties of wave functions, Normalization of wave functions, orthogonality of wave functions.	
	2.3	Operators and their algebra, linear and Hermitian operators, operators for the dynamic variables of a system such as, position, linear momentum, angular momentum, total energy, eigen functions, eigen values and eigen value equation, Schrödinger wave equation as the eigen value equation of the Hamiltonian operator, average value and the expectation value of a dynamic variable of the system, Postulates of Quantum Mechanics, Schrödinger's Time independent wave equation from Schrödinger's time dependent wave equation.	
	2.4	 Application of quantum mechanics to the following systems: a) Free particle, wave function and energy of a free particle. b) Particle in a one, two and three-dimensional box, separation of variables, Expression for the wave function of the system, expression for the energy of the system, concept of quantization, 	

	 introduction of quantum number, degeneracy of the energy levels. c) Harmonic oscillator, approximate solution of the equation, Hermite polynomials, expression for wave function, expression for energy, use of the recursion formula. [Ref 7, 8 and 9] 	
3	Chemical Kinetics and Molecular Dynamics-I	[15L]
3.1	Composite Reactions: Recapitulation: Rate laws, Differential rate equations Consecutive reactions, Steady state Approximation, rate determining steps, Microscopic Reversibility and Detailed Balanced Chain reactions-chain initiation processes. Some inorganic mechanisms: formation and decomposition of phosgene, decomposition of ozone, Reaction between Hydrogen and Bromine and some general examples Organic Decompositions: Decomposition of ethane, decomposition of acetaldehyde Gas phase combustion: Reaction between hydrogen and oxygen, Semenov – Hinshelwood and Thompson mechanism, Explosion limits and factors affecting explosion limits.	
3.2	Polymerization reactions: Kinetics of stepwise polymerization, Calculation of degree of polymerization for stepwise reaction. Kinetics of free radical chain polymerization, Kinetic chain length and estimation of average no. of monomer units in the polymer produced by chain polymerization.	
3.3	Reaction in Gas Phase Unimolecular Reactions: Lindeman-Hinshelwood theory, Rice- Ramsperger-Kassel (RRK) theory, Rice-Ramsperger-Kassel Marcus (RRKM) theory. [Ref. 2 and 15, 17, 18]	
4	Electrochemistry	[15L]
4.1	Debye-Hückel theory of activity coefficient, Debye-Hückel limiting law and its extension to higher concentration (derivations are expected).	
4.2	Electrolytic conductance and ionic interaction, relaxation effect, Debye-Hückel- Onsager equation (derivation expected). Validity of this equation for aqueous and non- aqueous solution, deviations from Onsager equation, Debye-Falkenhagen effect (dispersion of conductance at high frequencies), Wien effect.	
4.3	Batteries: Alkaline fuel cells, Phosphoric acid fuel cells, High temperature fuel cells [Solid –Oxide Fuel Cells (SOFC) and Molten Carbonate Fuel Cells	
4.2	Bio-electrochemistry: Introduction, cells and membranes, membrane potentials, theory of membrane potentials, interfacial electron transfer in biological systems, adsorption of proteins onto metals from solution, electron transfer from modified metals to dissolved protein in solution, enzymes as electrodes, electrochemical enzyme-catalysed oxidation of styrene. Goldmann equation. (Derivations are expected) [Ref: 14 and 16, 17, 18]

PROGRAM(s	SEMESTE	SEMESTER: I						
Course: Mandatory Course-II			Course Code: (CHEM503)					
		Course Thie	e: - Organi	c Chemistry-I				
Teaching Scher	ne				Evaluation Scheme			
Lectures (Hours per week)	Practical (Hours per week)	Tutorial (Hours per week)	Credit	Continuous Assessment (CA) (Marks- 50)	Semester End Examination (Marks- 50)			
04	NA		04	50	50			

Learning Objectives:

- 1) To enable learners to have comprehensive knowledge and understanding of the advanced concepts in reaction mechanism, stereochemistry, different reactions and reagents.
- 2) To apply the basic knowledge of Organic chemistry to perform various tasks assigned to them at the workplace in industry and academia to meet the job requirements as per global standards.
- 3) Accomplish a solution to problems encountered in the field of research.

Course Outcomes.

After completing the course students will be able to:

- 1) predict the reactivity of organic compound from its structure.
- 2) understand different methods used for determination of organic reaction mechanism.
- 3) understand the fundamental concept in stereochemistry by applying various symmetry elements of organic molecule.
- 4) acquire the knowledge of chirality by taking examples of symmetrical and unsymmetrical molecule.
- 5) develop interest in stereochemistry by studying stereochemical features of different classes of organic compounds
- 6) identify the nomenclature of various stereochemical phenomena.
- 7) organize the techniques of aromatic nucleophilic substitution reactions for synthesizing/transforming molecules.
- 8) understand the concept of aromaticity and to know the nature of bonds, electronic effects and other properties of molecules.
- 9) understand the preparation of important oxidizing reagent and predict the selectivity of the reagents in organic reactions.
- 10) explain the preparation and uses of important reducing reagents in various organic transformation reaction.

Course Code: (CHEM 503)	Unit	Course Title: - Organic Chemistry-I	Credits:04 60L
	1	Physical Organic Chemistry:	(15L)
	1.1	Thermodynamic and kinetic requirements of a reaction: rate and equilibrium constants, reaction coordinate diagram, transition state (activated complex), nature of activated complex, Hammond postulate, Reactivity <i>vs</i> selectivity, Curtin-Hammett Principle, Microscopic reversibility, Kinetic <i>vs</i> thermodynamic control of organic reactions.	
	1.2	Determining mechanism of a reaction: Product analysis, kinetic studies, use of isotopes (Kinetic isotope effect – primary and secondary kinetic isotope effect). Detection and trapping of intermediates, crossover experiments and stereochemical evidence.	
	1.3	Acids and Bases: Factors affecting acidity and basicity: Electronegativity and inductive effect, resonance, bond strength, electrostatic effects, hybridization, aromaticity and solvation. Comparative study of acidity and basicity of organic compounds on the basis of pKa values, Leveling effect and non-aqueous solvents. Acid and base catalysis – general and specific catalysis with examples.	
	2	Stereochemistry	(15 L)
	2.1	Concept of Chirality: Recognition of symmetry elements.	
	2.2	Molecules with tri- and tetra-coordinate centers: Compounds with carbon, silicon, nitrogen, phosphorous and sulphur chiral centers, relative configurational stabilities	
	2.3	Molecules with two or more chiral centers: Constitutionally unsymmetrical molecules: erythro-threo and syn-anti systems of nomenclature. Interconversion of Fischer, Sawhorse, Newman and Flying wedge projections. Constitutionally symmetrical molecules with odd and even number of chiral centers: enantiomeric and meso forms, concept of stereogenic, chirotopic, and pseudoasymmetric centres. R-S nomenclature for chiral centres in acyclic and cyclic compounds.	

2.4	Axial and planar chirality: Principles of axial and planar chirality	7
2.4		
	Stereochemical features and configurational descriptors (R,S) for	
	the following classes of compounds: allenes, alkyliden	
	cycloalkanes, spirans, biaryls (buttressing effect) (including	-
	BINOLs and BINAPs), ansa compounds, cyclophanes, trans	-
	cyclooctenes.	
2.5	Prochirality: Chiral and prochiral centres; prochiral axis and	d
	prochiral plane. Homotopic, heterotopic (enantiotopic and	d
	diastereotopic) ligands and faces. Identification using substitution	n
	and symmetry criteria. Nomenclature of stereoheterotopic ligand	s
	and faces. Symbols for stereoheterotopic ligands in molecules with	n
	i) one or more prochiral centres ii) a chiral as well as a prochira	1
	centre, iii) a prochiral axis iv) a prochiral plane v) pro	-
	pseudoasymmetric centre. Symbols for enantiotopic and	d
	diastereotopic face.	
3	Nucleophilic substitution reactions and Aromaticity	(15L)
	-	()
3.1	Nucleophilic substitution reactions. (9 L)	
	3.1.1 Aliphatic nucleophilic substitution: $S_N 1$, $S_N 2$, S_N^i	
	reactions, mixed S_N1 and S_N2 and SET mechanisms.	
	S_N reactions involving NGP - participation by aryl	
	S_N reactions involving NGP - participation by aryl rings, σ and pi-bonds. Factors affecting these

metallocenes, azulenes, annulenes, aromatic ions and Fullerene (C_{60}).	
Oxidation and Reduction:	(15L)
Oxidation: General mechanism, selectivity, and important applications of the following:	
4.1.1. Dehydrogenation: Dehydrogenation of C-C bonds including aromatization of six membered rings using metal (Pt, Pd, Ni) and organic reagents (chloranil, DDQ).	
4.1.2. Oxidation of alcohols to aldehydes and ketones: Chromium reagents such as K ₂ Cr ₂ O ₇ /H ₂ SO ₄ (Jones reagent), CrO ₃ -pyridine (Collin's reagent), PCC (Corey's reagent) and PDC (Cornforth reagent), hypervalent iodine reagents (IBX, Dess-Martin periodinane). DMSO based reagents (Swern oxidation), Corey-Kim oxidation - advantages over Swern and limitations; and Pfitzner-Moffatt oxidation-DCC and DMSO and Oppenauer oxidation.	
4.1.3. Oxidation involving C-C bonds cleavage: Glycols using HIO ₄ ; cycloalkanones using CrO ₃ ; carbon-carbon double bond using ozone, KMnO ₄ , CrO ₃ , NaIO ₄ and OsO ₄ ; aromatic rings using RuO ₄ and NaIO ₄ .	
4.1.4. Oxidation involving replacement of hydrogen by oxygen: oxidation of CH ₂ to CO by SeO ₂ , oxidation of arylmethanes by CrO ₂ Cl ₂ (Etard oxidation).	
4.1.5. Oxidation of aldehydes and ketones: with H ₂ O ₂ (Dakin reaction), with peroxy acid (Baeyer-Villiger oxidation)	
Reduction: General mechanism, selectivity, and important applications of the following reducing reagents:	
4.2.1. Reduction of CO to CH ₂ in aldehydes and ketones- Clemmensen reduction, Wolff-Kishner reduction and Huang- Minlon modification.	
4.2.2. Metal hydride reduction: Boron reagents (NaBH ₄ , NaCNBH ₃ , diborane, 9-BBN, Na(OAc) ₃ BH, aluminium reagents (LiAlH ₄ , DIBAL-H, Red Al, L and K- selectrides).	
4.2.3. N ₂ H ₂ (diimide reduction) and other non-metal-based agents including organic reducing agents (Hantzsch dihydropyridine).	
4.2.4. Dissolving metal reductions: using Zn, Li, Na, and Mg under neutral and acidic conditions, Li/Na-liquid NH ₃ mediated reduction of aromatic compounds (Birch reduction) and Alkynes.	
	 Fullerene (C₆₀). Oxidation and Reduction: Oxidation: General mechanism, selectivity, and important applications of the following: 4.1.1. Dehydrogenation: Dehydrogenation of C-C bonds including aromatization of six membered rings using metal (Pt, Pd, Ni) and organic reagents (chloranil, DDQ). 4.1.2. Oxidation of alcohols to aldehydes and ketones: Chromium reagents such as K₂Cr₂O₇/H₂SO₄ (Jones reagent), CrO₃-pyridine (Collin's reagent), PCC (Corey's reagent) and PDC (Cornforth reagent), hypervalent iodine reagents (IBX, Dess-Martin periodinane). DMSO based reagents (BX, Dess-Martin periodinane). DMSO based reagents (Swern oxidation), Corey-Kim oxidation - advantages over Swern and limitations; and Pfitzner-Moffatt oxidation-DCC and DMSO and Oppenauer oxidation. 4.1.3. Oxidation involving C-C bonds cleavage: Glycols using HIO₄; cycloalkanones using CrO₃; carbon-carbon double bond using ozone, KMnO₄, CrO₃, NaIO₄ and OsO₄; aromatic rings using RuO₄ and NaIO₄. 4.1.4. Oxidation involving replacement of hydrogen by oxygen: oxidation of CH₂ to CO by SeO₂, oxidation of arylmethanes by CrO₂Cl₂ (Etard oxidation). 4.1.5. Oxidation of CH₂ to CO by SeO₂, oxidation of arylmethanes by CrO₂Cl₂ (Etard oxidation). 4.1.6. Oxidation of CO to CH₂ in aldehydes and ketones-Clemmensen reduction; Boron reagents (NaBH₄, NaCNBH₃, diborane, 9-BBN, Na(OAc)₃BH, aluminium reagents (LiAlH₄, DIBAL-H, Red Al, L and K- selectrides). 4.2.3. N₂H₂ (dimide reduction) and other non-metal-based agents including organic reducing agents (Hatzsch dihydropyridine). 4.2.4. Dissolving metal reductions: using Zn, Li, Na, and Mg under neutral and acidic compiunds (Birch reduction) and

PROGRAM(s): M.ScI				SEMESTER: I	
Course : N	Course : Mandatory Course-III			Course Code: (CHEM 505)	
				Course Title:-Analytical Chemistry-I	
Teaching S	Scheme			Evaluation Scheme	
Lectures (Hours per	Practical (Hours per week)	Credit	Continuous Assessment (CA)	Semester End Examination (Marks- 50)	
week)			(Marks- 50)		
04	NA	04	50	50	

Learning Objectives:

- 1) To enable learners to have comprehensive knowledge, understanding of the types of instruments with operations and automated methods of analysis.
- 2) To apply the basic knowledge of quality systems, quality audit and quality managements.
- 3) To enable learners to perform various tasks assigned to them at the workplace in industry and academia to meet the job requirements as per global standards.
- 4) To provide solutions to problems encountered in the field of analysis and research.

Course Outcomes: After completion of this Course, the learner will be able to:

1. Understand various terms used in analytical chemistry.

2. Identify the different types of errors in analysis.

3. Sketch out the role and importance of total quality management, safety, accreditations and GLP in industries.

- 4. Understand the efficacy of automation in chemical analysis.
- 5. Design and specify applications of advanced analytical techniques in various fields.
- 6.Explore the applications of IR spectroscopy and thermal methods.
- 7. Perform basic calculations required in chemical analysis.
- 8. Interpret the experimental results of analytical techniques.

Course code- CHEM 505			Credits 04/ 60 Lectures
	1 (1.1)	Language of Analytical Chemistry	[15L]
		 1.1.1 Analytical perspective [3 L] Analytical approach. common analytical problems. Terms involved in analytical chemistry - Analysis, Analyte, Matrix, Determination, Measurement, Techniques, Methods, Procedures and protocol. 1.1.2 An overview of analytical methods [3 L] Analytical methods - Types, classification and selection. Quantitative method of Analysis- Calibration method, Method of Standard addition, Internal standard method. Performance Characteristics of analytical method- Accuracy, Precision, Selectivity, Sensitivity, Detection limit (LOD, LOQ, LOL), Dynamic range and Robustness and Ruggedness. 1.1.3 Errors [2 L] Types of errors. Absolute error, Relative error, Constant error and Proportionate errors. Minimization of errors. 	
	1.2	 Quality in Analytical Chemistry 1.2.1 Total Quality Management- TQM [3L] Definition, Principles, Importance and benefits. Philosophy of implementation of TQM -Process steps, Advantages and Limitations i) Kaizen -Six steps ii) Six Sigma approach iii) 5S and 5S audit check for laboratories. 1.2.2 Safety in laboratories [2L] Basic concept of safety in laboratory- The Industrial Hygiene Principles. Personal protection equipment (PPE). Occupational Safety and Health Administration (OSHA). 1.2.3 Accreditations [2L] Accreditation of laboratories, NABL, Indian Government standards (ISI, HALLMARK, AGMARK) Meaning and significance. 	

	2.	2.1 Calculations based on Chemical Principles	[15L]
		(The following topics are to be covered in the form of numerical problems only)	
		2.1.1 Concentration of a solution based on volume and mass	
		units.	
		2.1.2 Calculations of ppm, ppb and dilution of the solutions,	
		concept of mmol.	
		2.1.3 Stoichiometry of chemical reactions, concept of kg /mol,	
		limiting reactant, theoretical and practical yield.	
		2.1.4 Solubility and solubility equilibria, effect of presence of	
		common ion in solution.	
		2.1.5 Calculations of pH of acids, bases, acidic and basic	
		buffers.	
		2.1.6 Concept of formation constants, stability and instability	
		constants, stepwise formation constants.	
		2.1.7 Oxidation number, rules for assigning oxidation number,	
		redox reaction in term of oxidation number, oxidizing and	
		reducing agents, equivalent weight of oxidizing and reducing	
		agents, stoichiometry of redox titration (Normality of a solution	
		of an oxidizing / reducing agent and its relationship with	
		molarity).	
	3	Optical Methods	[15 L]
	3.1	3.1.1 Infrared Absorption Spectroscopy [6 L]	
		Instrumentation: Sources, Sample handling, Transducers,	
		Dispersive, non-dispersive instrument.	
		3.1.2 Applications of IR [Mid IR, Near IR, Far IR]: Qualitative	
		with emphasis on "Finger print" and Quantitative analysis.	
		3.1.3 Advantages and Limitations of IR.	
<u> </u>	3.2	FT Technique [3 L]	
		3.2.1 Introduction of Fourier Transform.	
		3.2.2 Laser as a source of radiation, sample containers.	
		3.2.2 Laser as a source of radiation, sample containers.3.2.3 Detectors, Fiber optics.	
	3.3	3.2.3 Detectors, Fiber optics.	
	3.3	3.2.3 Detectors, Fiber optics.3.2.4 FTIR and its advantages.	

	3.3.2 Applications of Ultraviolet and Visible spectroscopy:	
	i) On charge transfer absorptionii) Simultaneous spectroscopy	
	ii) Simultaneous spectroscopyiii) Derivative Spectroscopy	
	3.3.3 Dual spectrometry – Introduction, Principle, Instrumentation and Applications.	
4	Instrumental methods-I	[15 L]
4.1	Thermal Methods: [9 L]	
	4.1.1 Introduction: Types of thermal methods, comparison	
	between TGA and DTA.	
	4.1.2 Differential Scanning Calorimetry-Principle, comparison	
	of DTA and DSC.	
	4.1.3 Instrumentation, Block diagram, Nature of DSC Curve,	
	Factors affecting DSC Curves.	
	4.1.4 Applications - Heat of reaction, Safety screening,	
	Polymers, liquid crystals, Drug analysis.	
4.2	Automation in chemical analysis: [6 L]	
	4.2.1 Need for automation, Objectives of automation.	
	4.2.2 An overview of automated instruments.	
	4.2.3 Process control analysis, flow injection analysis, discrete	
	automated system, automatic analysis based on multi-layered	
	films, gas monitoring equipments.	
	4.2.4 Automatic titrators.

Course Ou	tcomes:					
1 77		C			1 • • • • 1 • 1	

- 1. To usage of subject fundamentals-principles with practical knowledge to design experiments, analyze and interpret data so as to reach to proper conclusions.
- 2. Learner will train the handling of equipments like potentiometer, conductivity meter, colorimeter and spectrophotometer.
- 3. Learner will develop scientific temper and research-based skills accomplish to encountered in the field of research.

The learner will be able to,

- 4. handle and get familiar with SOPs of instruments like potentiometer, conductivity meter, colorimeter and spectrophotometer.
- 5. understand the concept of non-aqueous titrations and apply it in analysis of samples.
- 6. apply the theory of redox reactions to experimental systems.
- 7. separate the component of interest from the matrix.
- 8. develop scientific temperament and research-based skills accomplish to encountered in the field of research.

Chemistry Practical-I

Course Code: PRCHEMAP 504

Course code- PRCHEMAP 504	Chemistry Practical-I	Credits:02	
	Physical Chemistry	01	
	Non – Instrumental:		
	 To determine the heat of solution (ΔH) of a sparingly soluble acid (benzoic/salicylic acid) from solubility measurement at three different temperatures. To study the variation of calcium sulphate with ionic strength and hence determine the thermodynamic solubility product of CaSO₄ at room temperature. 		
	 3. To investigate the reaction between acetone and iodine. 4. Graph Plotting of mathematical functions –linear, exponential and trigonometry and identify whether functions are acceptable or non-acceptable? Instrumental: 		
	 To determine the mean ionic activity coefficient of an electrolyte by e.m.f. measurement. To study the effect of substituent on the dissociation constant of acetic acid conductometrically. To determine pKa values of phosphoric acid by potentiometric titration with sodium hydroxide using glass electrode. To verify Ostwald's dilution law and to determine the dissociation constant of a weak mono-basic acid conductometrically. 		
	Analytical Chemistry	01	
	Instrumental Experiments 1. To determine percentage purity of sodium carbonate in		
	 washing soda pH metrically. 2. To determine amount of Ti(III) and Fe(II) in a mixture by titration with Ce(IV) potentiometrically. 		
	3. To determine the percentage purity of a sample (glycine/sodium benzoate/primary amine) by titration		

with perchloric acid in a non-aqueous medium using glass calomel system potentiometrically.4. To determine the amount of nitrite, present in the given
water sample colorimetrically.
Non-Instrumental Experiments 1.To carry out assay of the sodium chloride injection by Volhard's method.
2.To determine (a) the ion exchange capacity (b) exchange efficiency of the given cation exchange resin.
3.To determine amount of Cr (III) and Fe (II) individually in a mixture of the two by titration with EDTA.
4. To determine number of nitro groups in the given compound using $TiCl_3$.

Course Code:	Unit	Course Title - Inorganic Chemistry – I	Credits: 02
CHEM 50211		Elective- I	30L
	1	Chemical Bonding	[15 L]
		1.1 Recapitulation of hybridization Derivation of	
		wave functions for sp, sp ² , sp ³	
		orbital hybridization types considering only	
		sigma bonding.	
		1.2 Discussion of involvement of d orbitals in	
		various types of hybridizations.	
		Concept of resonance, resonance energy	
		derivation expected. Formal charge with examples.	
		1.3 Molecular Orbital Theory for diatomic species	
		of First transition Series.	
		1.4 Molecular Orbital Theory for Polyatomic	
		species considering σ bonding for SF ₆ , CO ₂ ,	
		B_2H_6 , I_3 ⁻ molecular species.	
		1.5 Weak forces of attraction: Hydrogen bonding –	
		concept, types, properties, methods of detection	
		and importance. Van der Waal's forces, ion-	
		dipole, dipole-dipole, London forces.	
	2	Molecular Symmetry and Group Theory	[15L]
		2.1. Symmetry criterion of optical activity,	
		symmetry restrictions on dipole moment. A	
		systematic procedure for symmetry classification	
		of molecules.	
		2.2. Concepts of Groups, Sub-groups, Classes of	
		Symmetry operations, Group Multiplication	
		Tables. Abelian and non-Abelian point groups.	
		2.3.a) Representation of Groups: Matrix	
		representation of symmetry operations, reducible	
		and irreducible representations. The Great	
		Orthogonality Theorem and its application in	
		construction of character tables for point groups	

C _{2V} , C _{3V} and C _{2h} structure of character tables.
b) Determination of symmetry species for
translations and rotations.
c) Mulliken's notations for irreducible
representations.
d) Reduction of reducible representations using
reduction formula.
2.4. Applications of Group Theory Symmetry
adapted linear combinations (SALC), symmetry
aspects of MO theory, sigma bonding in ABn
(NH ₃ , CH ₄) molecules.

Elective - II

Course Title – Inorganic Chemistry II Course Code: CHEM 50212

PROGRAM	Л: М.ScI	SEMESTER: I			
Course: E	lective-II	Course Code: CHEM. 50212 Course Title: - Inorganic Chemistry-II			
	Te	aching Scheme			Evaluation Scheme
Lectures (Hours per week)	Practical (Hours per week)	Tutorial (Hours per week)	Credit	Continuous Assessment (CA) (Marks-25)	Semester End Examination (Marks-25)
02	NA	_	02		

Learning Objectives:

Inorganic Chemistry

- 1. To have in depth knowledge of fundamentals of wave mechanics applicable to study electrical conductivity of solids
- 2. 2.To learn structural aspects of inorganic compounds
- 3. To have awareness about cutting age topic like solid state lasers having wide commercial applications.
- 4. To enable the spectroscopic methods of characterization of inorganic compounds
- 5. To develop the ability to solve numerical expressions using instrumental techniques.

Course Outcomes:

The learners will be able to:

1. elucidate the structures of inorganic compounds and know the wide applications of solid state lasers.

2. represent schematically Orgel and Tanabe Sugano diagrams, splitting of terms in octahedral environment.

3. calculate electron parameters with respect to inorganic complexes.

Course Code: CHEM 50212	Unit	Course Title - Inorganic Chemistry -II Elective- II	Credits: 02 30L
	1	Materials Chemistry and Nanomaterials	[15 L]
		1.1 Solid State Chemistry	
		1.1.1 . Electronic structure of solids and band theory, Fermi level, K Space and Brillouin Zones.	
		1.1.2 . Structures of Compounds of the type: AB [nickel arsenide (NiAs)], AB ₂ [fluorite (CaF ₂) and anti-fluorite structures, rutile (TiO ₂)	
		1.1.3. Solid state lasers: Introduction, types, working and Applications1.2 Nanomaterials	
		1.2.1 Preparative methods, Chemical methods, solvothermal, combustion synthesis, microwave, coprecipitation, Langmuir-Blodgett(LB) method, biological methods, synthesis using microorganism.	
		1.2.2 Applications in the field of semiconductors, solar cells.	
	2	Characterization of Coordination compounds	[15L]
		2.1 . Methods of Characterization: thermal studies, Conductivity measurements, electronic spectral and magnetic measurements, IR, NMR and ESR spectroscopic methods.	
		2.2. Introduction to Orgel & Tanabe Sugano Diagram, Terms, Splitting of terms in Octahedral environment, Calculation of electron parameters such as Δ ,B'C, Nephelauxetic ratio with suitable examples.	
		2.3. Determination of formation constants of metal complexes (Overall and Stepwise): Comparative studies of Potentiometric and spectrophotometric method.

Elective Practical: Chemistry Practicals Course Code - CHEM 50211/ CHEM 50212 Course Title – Inorganic Chemistry and Organic Chemistry

PROGRAM : M.ScI				SEMESTER: I		
Course: Elective Course Practicals				Course Code: CHEM 50211/ CHEM 50212		
				Course Title: - Inorganic Chemistry and Organic Chemistry		
Teaching Scheme				Evaluation Scheme		
Lectures (Hours per	Practical (Hours	Credit	Continuous Assessment	Semester End Examination		
week)	per week)		(CA) (Marks- 25)	(Marks- 25)		
	04	02	25	25		

Learning Objectives:

- 1. To develop practical skills such as decomposition of Alloys/Ores and carry out a Quantitative Analysis of the elements present in them.
- 2. To learn the instrumental techniques to study properties of inorganic compound
- 3. Planning of synthesis, effect of reaction parameters including stoichiometry, and safety aspects including MSDS should be learnt.
- 4. Purify the product by crystallization. Formation and purity of the product should be checked by TLC
- 5. Report mass and melting point of the purified product.

Course Outcomes: Learners will be able to:

- 1. To apply the knowledge of quantitative analysis for the determination of metals from ores/alloys.
- 2. To have training of handling of instruments, and learning the techniques of instrumental analysis of various commercial inorganic compounds.

Course Code: CHEM 50211/	Elective Practical: Chemistry Practicals	Credits	
CHEM 50212		02	
	Inorganic Chemistry	01	
	Ores and Alloys 1) Analysis of Devarda ^{**} s alloy		
	2) Analysis of Cu – Ni alloy		
	3) Analysis of Limestone.		
	4) Analysis of Tin Solder alloy		
	Instrumentation 1) Estimation of Fe (III)solution using Ce (IV) ions		
	Potentiometrically2) Estimation of Copper using Iodometric method Potentiometrically		
	 3) Estimation of Na₂CO₃ in washing soda by pH metry 4) Estimation of Cl- ion in NaCl/KCl by Conductometry 		
	Organic Chemistry	01	
	One step preparation (1.0 g scale)		
	1. Bromobenzene to p-nitrobromobenzene		
	2. Anthracene to anthraquinone		
	3. Benzoin to benzil		
	4. Anthracene to Anthracene maleic anhydride adduct		
	5. 2-Naphthol to BINOL		
	6. p-Benzoquinone to 1,2,4-triacetoxybenzene		
	7. Ethyl acetoacetate to 3-methyl-phenylpyrazol-5-one		
	8. <i>o</i> -Phenylenediamine to 2-methylbenzimidazole		
	9. <i>o</i> -Phenylenediamine to 2,3-diphenylqunooxaline		
	10. Urea and benzil to 5,5-diphenylhydantoin		
	(Minimum 08 experiments are expected)

Course code: CHEM506		Course Tit	Course Title: - Research Methodology						
Teaching Sch	eme					Evaluation Scheme			
Lectures (Hours per week)	Practical (Hours per week)	Tutorial (Hours per week)	Credit	Continuous Assessment (CA) (Marks- 50)	Semester En (Marks- 50)	d Examination			
04	_	_	04	50		50			
 To create awareness and understanding the terms like intellectual property, patents, copyright, industrial designs, trademarks, geographical indications etc. To know trade secrets, IP infringement issues, economic value of intellectual property and study of various related international agreements. To explore cheminformatics to facilitate molecular modeling and structure elucidations. To apply the knowledge gained about various chemistry principles, techniques and tools in drug designing, target identification and validation, lead finding and optimization. 									
 Course Outcomes: At the end of the Course, 1. To enable the student to be able to extract information from journals and digital resources. 2. Understanding tools to analyse the data, writing and presenting scientific papers. 3. Safe working procedure and ethical handling of chemicals. 									
4. Describe research, identification of research problems, and preparation of proposals.5. Practice ethics in all the domains of research.									
6. Analyze the results using mathematical and statistical tools.									
Course Code: - CHEM50	Unit 6	Course/ Unit 7	fitle: Rese	earch Methodolog	у.	04 Credits / 60 Lectures			
	1	Literature	Survey			15 L			
	1.1	Journal ab reviews, mo	breviation nographs,	and Tertiary sources, abstracts, cu dictionaries, textb to Chemical A	urrent titles, ooks, current	5 L			

	Beilstein, Subject Index, Substance Index, Author Index, Formula Index, and other Indices with examples.	
1.2	Digital: Web sources, E-journals, Journal access, TOC alerts, Hot articles, Citation Index, Impact factor, H-index, E-consortium, UGC infonet, E-books, Internet discussion groups and communities, Blogs, preprint servers, Search engines, Scirus, Google Scholar, ChemIndustry, Wiki-databases, ChemSpider, Science Direct, SciFinder, Scopus.	5 L
1.3	Information Technology and Library Resources : The Internet and World wide web, Internet resources for Chemistry, finding and citing published information.	5 L
2	DATA ANALYSIS	15 L
	The Investigative Approach: Making and recording Measurements, SI units and their use, Scientific methods and design of experiments. Analysis and Presentation of Data: Descriptive statistics, choosing and using statistical tests, Chemometrics, Analysis of Variance (ANOVA), Correlation and regression, curve fitting, fitting of linear equations, simple linear cases, weighted linear case, analysis of residuals, general polynomial fitting, linearizing transformations, exponential function fit, r and its abuse, basic aspects of multiple linear regression analysis.	
3	METHODS OF SCIENTIFIC RESEARCH AND WRITING SCIENTIFIC PAPERS	15 L
	Reporting practical and project work, writing literature surveys and reviews, organizing a poster display, giving an oral presentation. Writing Scientific Papers: Justification for scientific contributions, bibliography, description of methods, conclusions, the need for illustration, style, publications of scientific work, writing ethics, avoiding plagiarism.	
4	CHEMICAL SAFETY & ETHICAL HANDLING OF CHEMICALS	15 L
	Safe working procedure and protective environment, protective apparel, emergency procedure, first aid, laboratory ventilation, safe storage and use of hazardous

PROGRAM(s): M.ScI	SEMESTER:	II		
Course: Man	datory Course-I	Course Code: CHEM 507 Course Title: - Physical Chemistry-II			
Teaching S	cheme	Γ		Γ	Evaluation Scheme
Lectures (Hours per week)	Practical (Hours per week)	Tutorial (Hours per week)	Credit	Continuous Assessment (CA) (Marks- 50)	Semester End Examination (Marks- 50)
04	NA	-	04	50	50

Learning Objectives:

- 1. To gain knowledge of the advanced concepts in quantum mechanics, applications of HMO theory, chemical kinetics and molecular dynamics.
- 2. To understand the advanced concepts in chemical thermodynamics and photochemistry.
- 3. To develop the skill to solve the problems encountered in the field of quantum and electrochemistry.

Course outcomes: -

- 1. To learn the concept of quantum chemistry and able to solve problems related to 1D box, 2D box, 3D box and to explain the role of operators in quantum chemistry.
- 2. To understand the use of Schrodinger wave equation in one and two electron systems along with applications of HMO.
- 3. To develop the skill to solve the problems based on chemical thermodynamics, molecular dynamics and quantum Chemistry.
- 4. To apply the concept of Jablonski mechanism in photochemical reactions.
- 5. Learners will get knowledge of advanced chemical kinetics and molecular dynamics.

Course Code: - CHEM- 507	Unit	Course/ Unit Title: Physical Chemistry-II	04 Credits / 60 Lectures
	1	Chemical Thermodynamics II	[15 L]
	1.1.	Fugacity of real gases , Determination of fugacity of real gases using graphical method and from equation of state. Equilibrium constant for real gases in terms of fugacity. Gibbs energy of mixing, entropy and enthalpy of mixing.	
	1.2	Real solutions: Chemical potential in non-ideal solutions excess functions of non-ideal solutions calculation of partial molar volume and partial molar enthalpy, Gibbs Duhem Margules equation.	
	1.3	Thermodynamics of surfaces , Pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET isotherm (derivations expected).	
	1.4	Bioenergetics: standard free energy change in biochemical reactions, exergonic, endergonic. Hydrolysis of ATP, synthesis of ATP from ADP. [Ref 2 and 1,10,11,12]	
	2	Quantum Chemistry II	[15 L]
	2.1	Rigid rotor, spherical coordinates Schrödinger wave equation in spherical coordinates, separation of the variables, the phi equation, wavefunction, quantum number, the theta equation, wave function, quantization of rotational energy, spherical harmonics.	
	2.2	Hydrogen atom, the two particle problem, separation of the energy as translational and potential, separation of variables, the Radial (R), Zenith (theta) and Azimuthal (Phi) equations, solution of the equation, introduction of the four quantum numbers and their interdependence on the basis of the solutions of the three equations, total wave function, expression for the energy, probability density function, distances and energies in atomic units, radial and angular plots, points of maximum probability.	
	2.3.	Application of the Schrödinger equation to two electron	

	system, limitations of the equation, need for the approximate solutions, methods of obtaining the approximate solution of the Schrödinger wave equation	
2.4	 Hückel Molecular Orbitals theory for ethylene, 1,3-butadiene, cyclobutadiene and benzene. (<i>Derivation expected</i>) [Ref 7, 8 and 9] 	
3	Chemical Kinetics and Molecular Dynamics-II	[15 L]
3.	Elementary Reactions in Solution: - Solvent Effects on reaction rates, Reactions between ions- influence of solvent Dielectric constant, influence of ionic strength, Linear free energy relationships Enzyme action.	
3.2	Kinetics of reactions catalyzed by enzymes -Michaelis- Menten analysis, Lineweaver-Burk and Eadie Analyses.	
3.:	Inhibition of Enzyme action: Competitive, Noncompetitive and Uncompetitive Inhibition. Effect of pH, Enzyme activation by metal ions, Regulatory enzymes.	
3.4	 Kinetics of reactions in the Solid State: - Factors affecting reactions in solids Rate laws for reactions in solid: The parabolic rate law, The first order rate law, the contracting sphere rate law, Contracting area rate law, some examples of kinetic studies. (Ref: 7 and 2, 22) 	
4	Photochemistry	[15 L]
4.	Absorption of light, laws of photochemistry, electronic structure of molecules, molecular orbital, electronically excited singlet states, designation based on multiplicity rule, construction of Jablonski diagram, electronic transition, Frank Condon principle, selection rules, intensity of absorption bands, nature of electronic spectra and primary process, photo- dissociation, pre-dissociation.	
4.	Photo physical phenomena: physical pathways of excited molecular system (radiative and non-radiative), prompt fluorescence, delayed fluorescence, and phosphorescence, fluorescence quenching: concentration quenching, collisional quenching, quenching by excimer and exciplex emission, fluorescence resonance energy transfer between photo-excited donor and acceptor systems.	
4.:	Stern-Volmer relation, critical energy transfer distances, energy transfer efficiency, examples and applications in chemical analysis. Photochemical reactions, photo-oxidation,	

photoreduction, photo-dimerization, photoisomerization and photosensitized reactions. Photochemistry of environment:
Greenhouse effect.

PROGRAM:	M.ScI	SEMEST	ER: II		
Course: Mandato	ory Course -II	Course Code: CHEM 509 Course title: Organic Chemistry-II			
Teaching Sch	eme				Evaluation Scheme
Lectures	Practical	Tutoria l	Credit	Continuous	Semester End
(Hours per week)	(Hours per week)	(Hours per week)		Assessment (CA) (Marks- 50)	Examination (Marks- 50)
04	NA	-	04	50	50

Learning Objectives:

 To enable learners to have comprehensive knowledge and understanding of the advanced concepts in reaction Mechanism, molecular orbital theory, different rearrangement reactions and spectroscopic techniques.
 To apply the basic knowledge of Organic chemistry to perform various tasks assigned to them at the workplace in industry and academia to meet the job requirements as per global standards.

3. Accomplish a solution to problems encountered in the field of research.

Course Outcomes:

After completing the course students will be able to:

- 1) Recognize the type of mechanism & intermediates involved in the given organic reaction and to prove mechanism for the reaction.
- 2) Identify the ways to modify aliphatic and aromatic compounds via Nucleophilic substitution reactions.
- 3) Predict the mechanism and stereochemistry of important organic reactions.
- 4) Understand and write the mechanism of rearrangement reactions with stereochemistry and its applications.
- 5) Understand the HOMO-LUMO concept and it significance in organic chemistry.
- 6) Understand the basic principle and concepts in UV and IR spectroscopy
- 7) Understand the basic concepts of ¹H, ¹³C NMR, and mass spectroscopy.
- 8) Understand how ¹H, ¹³C NMR and Mass spectroscopy are important for the structure determination of organic compounds.

Course Code:- CHEM 509	Unit	Course/ Unit Title: Organic Chemistry -II	04 Credits / 60 Lectures
	1	 1.1. Alkylation of Nucleophilic Carbon Intermediates: 1.1.1. Generation of carbanion, kinetic and thermodynamic enolate formation, Regioselectivity in enolate formation, alkylation of enolates. 1.1.2. Generation and alkylation of dianion, medium effects in the alkylation of enolates, oxygen versus carbon as the site of alkylation. 1.1.3. Alkylation of aldehydes, ketones, esters, amides and nitriles. 1.1.4. Nitrogen analogs of enols and enolates- Enamines and Imines anions, alkylation of enamines and imines. 1.1.5. Alkylation of carbon nucleophiles by conjugate addition (Michael reaction). 	(7 L)
		 1.2. Reaction of carbon nucleophiles with carbonyl groups: 1.2.1. Mechanism of Acid and base catalyzed Aldol condensation, Mixed Aldol condensation with aromatic aldehydes, Regio chemistry in mixed reactions of aliphatic aldehydes and ketones, intramolecular Aldol reaction and Robinson annulation. 1.2.2. Addition reactions with amines and iminium ions; Mannich reaction. 1.2.3. Amine catalyzed condensation reaction: Knoevenagel reaction. 1.2.4. Acylation of carbanions 	(8 L)
	2	 2.1 Introduction to Molecular Orbital Theory for Organic Chemistry: 2.1.1. Molecular orbitals: Formation of σ- and π-MOs by using LCAO method. Formation of π MOs of ethylene, butadiene, 1, 3, 5-hexatriene, allyl cation, anion and radical. Concept of nodal planes and energies of π-MOs 2.1.2. Introduction to FMOs: HOMO and LUMO and significance of HOMO-LUMO gap in absorption spectra as well as chemical reactions. MOs of formaldehyde: The effect of electronegativity perturbation and orbital polarization in formaldehyde. HOMO and LUMO (π and π* orbitals) of formaldehyde. A brief description of MOs of nucleophiles and electrophiles. Concept of 'donor- 	(7L)

	 acceptor' interactions in nucleophilic addition reactions on formaldehyde. Connection of this HOMO-LUMO interaction with 'curved arrows' used in reaction mechanisms. The concept of hardness and softness and its application to electrophiles and nucleophiles. Examples of hard and soft nucleophiles/ electrophiles. Identification of hard and soft reactive sites on the basis of MOs. 2.1.3. Application of FMO concepts in (a) S_N² reaction, (b) Lewis acid base adducts (BF₃-NH₃ complex), (c) ethylene dimerization to Cyclobutane, (d) Diels-Alder cycloaddition, (e) regioselective reaction of allyl cation with allyl anion (f) addition of hydride to formaldehyde. 	
2.2	 Applications of UV and IR spectroscopy: 2.2.1. Ultraviolet spectroscopy: Recapitulation, UV spectra of dienes, conjugated polyenes (cyclic and acyclic), carbonyl and unsaturated carbonyl compounds, substituted aromatic compounds. Factors affecting the position and intensity of UV bands – effect of conjugation, steric factor, pH, and solvent polarity. Calculation of absorption maxima for above classes of compounds by Woodward-Fieser rules (using Woodward-Fieser tables for values for substituents). 2.2.2. Infrared spectroscopy: Fundamental, overtone and combination bands, vibrational coupling, factors affecting vibrational frequency (atomic weight, conjugation, ring size, solvent and hydrogen bonding). Characteristic vibrational frequencies for alkanes, alkenes, alkynes, aromatics, alcohols, ethers, phenols, amines, nitriles and nitro compounds. Detailed study of vibrational frequencies of carbonyl compounds, aldehydes, ketones, lactams and conjugated carbonyl compounds. 	(8L)
3	 Reactions and Rearrangements: Mechanisms, stereochemistry (if applicable) and applications of the following: 3.1. Reactions: Baylis-Hillman reaction, McMurry Coupling, Corey-Fuchs reaction, Nef reaction, 	(15L)

	Passerini reaction.	
	3.2. Concerted rearrangements: Hofmann, Curtius, Lossen, Schmidt, Wolff, Boulton-Katritzky.	
	3.3. Cationic rearrangements: Tiffeneau-Demjanov, Pummerer, Dienone-phenol, Rupe, Wagner-Meerwein.	
	3.4. Anionic rearrangements: Brook, Neber, Von Richter, Wittig, Gabriel–Colman, Baker-Venkataraman.	
4	¹ H and ¹³ C NMR spectroscopy and Mass spectrometry	(15L)
	4.1. Proton magnetic resonance spectroscopy: Principle, Chemical shift, Factors affecting on chemical shift (Electronegativity, H-bonding, Anisotropy effects). Chemical and magnetic equivalence, Chemical shift values and correlation for protons bonded to carbon and other nuclei as in alcohols, phenols, enols, carboxylic acids, amines, amides. Spin-spin coupling, Coupling constant (J), Factors affecting J, geminal, vicinal, Karplus equation, long range coupling (allylic and aromatic).	
	4.2. ¹³ C NMR spectroscopy: Theory and comparison with proton NMR, proton coupled and decoupled spectra, off-resonance decoupling. Factors influencing carbon shifts, correlation of chemical shifts of aliphatic, olefin, alkyne, aromatic and carbonyl carbons.	
	4.3. Mass spectrometry: Basic Principle, Molecular ion peak, base peak, isotopic abundance, metastable ions. Nitrogen rule, Determination of molecular formula of organic compounds based on isotopic abundance and HRMS. Fragmentation pattern in various classes of organic compounds (including compounds containing hetero atoms), McLafferty rearrangement, Retro-Diels-Alder reaction, ortho effect.	
	4.4. Structure determination involving individual or combined use of the above spectral techniques.

PROGRAM	I(s): M.ScI		SEMESTER: II	
Course : Mandatory course - III			Course Code: (CHEM 510)	
				Course Title:-Analytical Chemistry-II
Teaching Scheme			Evaluation Scheme	
Lectures	Practical	Credit	Continuous	Semester End Examination
(Hours per week)	(Hours per week)		Assessment (CA) (Marks- 50)	(Marks- 50)
04	NA	04	50	50

Course Objectives:

1. To gain knowledge of the chromatography techniques and its applications.

2. To understand application of X-ray spectroscopy for qualitative and quantitative analysis.

3. To introduce radio analytical techniques.

4. To apply the surface analytical techniques for system.

5. To study advantages and applications of electroanalytical methods.

Course outcomes: -

After completion of this Course, the learner will be

1. able to compare the advantages/disadvantages of SEM, STM and TEM.

2. able to develop different techniques to separate the components of mixture.

3. conversant with basic principles and theories of mass spectrometry.

4. able to apply the electroanalytical methods to sample under consideration.

5. able to elaborate on electrogravimetry and coulometry techniques.

Course Code:- CHEM 510	Unit	Course/ Unit Title: Analytical Chemistry-II	04 Credits / 60 Lectures
	1	Chromatography	15L
	1.1	 Basic concepts and theories of chromatography: [5 L] 1.1.1 Introduction and Classification of chromatographic methods. 1.1.2 Concept of plate and rate theories in chromatography, efficiency, resolution, selectivity and separation capability. 1.1.3 Van Deemter equation and broadening of chromatographic peaks. Optimization of chromatographic conditions. 	
	1.2	 Gas Chromatography: [5 L] 1.2.1 Instrumentation –sample injection systems (split/split less), column types (solid/ liquid stationary phases), column switching techniques, temperature programming. 1.2.2 Requirements of an ideal detector and types of detectors in GLC and GSC. 1.2.3 Applications -Qualitative and quantitative analysis. 	
	1.3	 High Performance Liquid Chromatography (HPLC):[5 L] 1.3.1 Normal phase and reversed phase with special reference to types of commercially available columns (Use of C8 and C18 columns). 1.3.2 Diode array type and fluorescence detector. 1.3.3 Applications of HPLC. 	
	2	Instrumental methods - II	15L
		 2.1 X-ray spectroscopy: [6 L] Principle, instrumentation, applications, advantages and limitations of 2.1.1 X-ray absorption spectroscopy. (XAS) 2.1.2 X-ray fluorescence spectroscopy (XRF) 2.1.3 X-ray diffraction spectroscopy. (XRD) 	
		 2.2 Mass spectrometry: [6 L] 2.2.1 Instrumentation - Ion sources - electron impact, field ionization, field absorption, chemical ionization and fast atom bombardment sources. Mass analyzers: Quadrupole, time of flight and ion trap. 	

	2.2.2 Applications	
	2.3 Radio analytical Methods – [3 L]	
	2.3.1 Neutron Activation Analysis (NAA)- Introduction, Principle, Theory and Applications.2.3.2 Advantages and Limitations of NAA.	
3	Instrumental methods - III	15L
3.1	Surface Analytical Techniques – [9 L]	
	Principle, Instrumentation and Applications of:	
	3.1.1 Scanning Electron Microscopy (SEM)	
	3.1.2 Scanning Tunneling Microscopy (STM)	
	3.1.3 Transmission Electron Microscopy (TEM)	
3.2	Atomic Spectroscopy [6 L]	
	3.2.1 Atomic Spectroscopy based on plasma sources – Introduction, Principle, Instrumentation and Applications.	
	3.2.2 Advantages and Limitations of AAS	
4	Electroanalytical Methods	15L
4.1	Ion selective potentiometry and Polarography: [10L]	
	4.1.1 Ion selective electrodes: Applications of - solid state, precipitate, liquid –liquid, enzyme, gas sensing, bio-catalytic membrane and enzyme-based biosensors electrodes.	
	4.1.2 Polarography: Ilkovic equation, Cottrell equation, effect of complex formation on the polarographic waves.	
4.2	Electrogravimetry: [2 L]	
	4.2.1 Introduction, Principle and Instrumentation.	
	4.2.2 Factors affecting the nature of the deposit.	
	4.2.3 Applications.	
4.3	Coulometry: [3 L]	
	4.3.1 Introduction, Principle and Instrumentation.	
	4.3.2 Coulometry at controlled potential and controlled current.

		of research						

Course code:- PRCHEMA P 511	Chemistry Practical-II	Credits 02
	Physical Chemistry	01 Credit
	Non – Instrumental:	
	 Polar plots of atomic orbitals such as 1s, 2Pz and 3 dz2 orbitals by using angular part of hydrogen atom wave functions. To study the influence of ionic strength on the base catalysed hydrolysis of ethyl acetate. To study phase diagram of three component system water – chloroform /toluene - acetic acid. To determine the rate constant of decomposition 	
	reaction of diacetone alcohol by dialtometric method. Instrumental:	
	1. To determine the formula of silver ammonia complex by potentiometric method.	
	 2. To determine CMC of sodium Lauryl Sulphate from measurement of conductivities at different concentrations. 3. To determine Hammette constant of <i>m</i>- and <i>p</i>- amino benzoic 	
	acid/nitro benzoic acid by pH measurement. 4. To determine the Michaelis – Menten's constant value (Km) of the enzyme Beta Amylase spectrophotometrically	
	Analytical Chemistry	01 Credit
	 Instrumental Experiments To determine the amount of Fe(II) and Fe(III) in a mixture using1,10-phenanthroline spectrophotometrically. Simultaneous determination of Cr(VI) and Mn(VII) in a mixture spectrophotometrically. To determine the percentage composition of HCl and H₂SO₄ on weight basis in a mixture of two by conductometric titration with NaOH and BaCl₂. To determine amount of potassium in the given sample of fertilizers using flame photometer by standard addition method. 	
	1. To determine the lead and tin content of a solder alloy by titration with EDTA.	

2. To determine amount of Cu(II) present in the given solution containing a mixture of Cu(II) and Fe(II).	
3. To determine the break through capacity of a cation exchange resin.4. Estimation of a mixture of Hydrochloric acid and boric acid by acid base titration

Lectures Practical (Hours per (Hours per week) week)		Tutorial (Hours per week)	(Hours per (Marks- 25)		Semester End Examination (Marks- 25)			
02	NA	-	02					
 Learning Objectives: Inorganic Chemistry To have in depth understanding of mechanisms of inorganic reactions and methods used for determination of rate of reactions. To gain knowledge of organometallic compounds with respect to synthesis structure and bonding. 								

Course Outcomes:

Learner will be able to:

- 1) elucidate on the rate, mechanism of inorganic reactions including substitution, redox and isomerization reactions and on the methods of determination of rate of reactions.
- 2) compare the stability of complexes elaborate different methods of preparation and analyze structure and bonding.

Course Code:- CHEM 50811	Unit	Course/ Unit Title: Inorganic Chemistry-III	02 Credits / 30 Lectures
	1	Inorganic Reaction Mechanism 1.1 Rate of reactions, factors affecting the rate of reactions, techniques for determination of rate of reaction (Direct chemical analysis, spectrophotometric method, electrochemical and flow methods). 1.2 Ligand substitution reactions of: a) Octahedral complexes without breaking of metal-ligand bond (Use of isotopic labelling method) b) Square planar complexes, trans-effect, its theories and applications. Mechanism and factors affecting these substitution reactions. 1.3 Redox reactions: inner and outer sphere mechanisms, complimentary and non-complimentary reactions.	[15 L]
	2	 1.4 Isomerization and racemization reactions Organometallic Chemistry of Transition metals: 2.1. Eighteen electron rule and electron counting with examples, 	[15 L]
		 sixteen electron Square Planar complexes. 2.2. Preparation and properties of the following compounds (a) Alkyl and aryl derivatives of Pd and Pt complexes (b) Carbenes and carbynes of Cr, Mo and W (c) Alkene derivatives of Pd and Pt (d) Alkyne derivatives of Pd and Pt (e) Allyl derivatives of nickel (f) Sandwich compounds of Fe, Cr and Half Sandwich compounds of Cr, Mo. 2.3 Structure and bonding on the basis of VBT and MOT in the following organometallic compounds: Zeise"s salt, bis(triphenylphosphine)diphenylacetylene platinum 	

 (0) [Pt(PPh₃)₂(HC≡CPh)₂], diallylnickel(diallylnickel(II), ferrocene and bis(arene)chromium(0), tricarbonyl (η²-butadiene) iron(0).

Chemistry Practicals (Inorganic Chemistry and Organic Chemistry) Course Code: CHEM 50811/CHEM 50812

PROGRAM(s): M.ScI Course : Elective Course Chemistry Practicals				SEMESTER: II	
				Course Code: CHEM 50811/CHEM 50812	
				Course Title: - Inorganic Chemistry and Organic Chemistry	
Teaching Scheme				Evaluation Scheme	
Lectures (Hours per	Practical (Hours	Credit	Continuous Assessment	Semester End Examination	
week)	per week)		(CA) (Marks- 25)	(Marks- 25)	
	04	02			

Learning Objectives:

- 1. To understand the application of theoretical concept of metal ligand coordination by synthesizing inorganic complexes
- 2. To learn the established instrumental techniques in order to study properties of inorganic compounds.
- 3. To learn Organic mixture separations, purification methods and characterization steps of organic compounds.

Course Outcomes

After completion of this Course, the learner will be able to

- 1. apply theoretical concepts of coordination chemistry to synthesize inorganic complex compounds.
- 2. get knowledge of instrumental techniques, appropriate skillful handling of instruments, representation of data and interpretation of graphical results.
- 3. learn determination of chemical types of different organic binary mixture.
- 4. learn to separate solid organic binary mixtures on the basis of solubility.
- 5. learn to purify the separated organic compound by recrystallization technique.
- 6. learn characterization steps of organic compounds

Course Code:	Elective Practical: Chemistry Practicals	Credits
CHEM 50811/ CHEM 50812	Course Title: - Inorganic Chemistry and Organic Chemistry	02
	Inorganic Chemistry	01
	Inorganic Preparations (Synthesis and	
	Characterization)	
	1) Bis-(tetramethylammonium) tetrachloro Cuprate (II) (Me ₄ N) ₂ [CuCl ₄]	
	2) Bis-(tetramethylammonium) tetrachloro Nickelate (II) (Me ₄ N) ₂ [NiCl ₄]	
	3) Bis (ethylenediammine) Copper (II) Sulphate [Cu(en) ₂]SO ₄	
	4) Hexaaamine Ni(II) Sulfate [Ni(NH ₃) ₆]SO ₄	
	5)Potassium trioxalato Chromate(III) K ₃ [Cr(C ₂ O ₄) ₃]	
	6) Tetrammine monocarbanato Cobalt (III) Nitrate [Co(NH ₃) ₄ CO ₃]NO ₃	
	 Instrumentation Determination of equilibrium constant by Slope intercept method for Fe⁺³/ SCN⁻ system 	
	2) Determination of Electrolytic nature of inorganic compounds by Conductance measurement.	
	Organic Chemistry	01
	Separation of Binary mixture using micro-scale technique 1.Separation of binary mixture using physical and chemical methods. 2.Characterization of one of the components with the help of chemical analysis and confirmation of the structure with the help of derivative preparation and its physical constant. 3.Purification and determination of mass and physical constant of the second component. The following types are expected: i)Water soluble/water insoluble solid and water insoluble solid, ii)Non-volatile liquid-Non-volatile liquid (chemical separation) iii) Water-insoluble solid-Non-volatile liquid. (Minimum two mixtures from each type and a total of eight mixtures are expected.)

PROGRAM(s): M.Sc-I		SEMESTER: II			
Course: Industrial Training/ Field Projects		Course Code: CHEM 512			
Teaching Scheme Evaluation Scheme				Evaluation Scheme	
Lectures (Hours per week)	Practical (Hours per week)			Semester End Examination (Marks- 50)	
NA	08	_	04	50	50
 Learning Objectives: 1. To provide students the opportunity to test their interest in a particular career before permanent commitments are made. 2. To develop skills in the application of theory to practical work situations. To develop skills and techniques directly applicable to their careers. 					
Course Outcomes:					
At the end of the Course,					
1. Understand the Organizational Structure of a company.					
 Develop work habits and attitudes necessary for job success (technical competence, professional attitude, organization skills etc.) 					

3. Develop written communication and technical report writing skills.

Proposed Structure of Assessment Theory Examination Pattern: A. Internal Assessment- 50%- 50 Marks per paper

Sr.No.	Evaluation Type	Marks
1	Written Objective/Short Answer Examination	25
2	Assignment/ Case study/ field visit report/ presentation/ project	25
	Total	50

External Examination- 50%-

50 Marks per paper Semester End Theory Examination:

Duration - These examinations shall be of two hours duration.

Theory question paper pattern:

There shall be 05 questions each of 10 marks on each unit.

All questions shall be compulsory with internal choice within the questions.

Question	Options	Marks	Questions Based on
Q.1	2 out of 4	10	Unit I
Q.2	2 out of 4	10	Unit II
Q.3	2 out of 4	10	Unit III
Q.4	2 out of 4	10	Unit IV
Q.5	5 out of 8	10	Units (I+II+III+IV)
	TOTAL	50	

Paper Pattern:

Semester End Practical Examination:

Particulars	Continuous assessment (CA)	Semester end external examination
Laboratory work	15	15
Viva	05	05
Journal	05	05
Total	25	25

PRACTICAL BOOK/JOURNAL

The students are required to perform 75% of the Practical for the journal to be duly certified. The students are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

Letter Grades and Grade Points

Semester GPA/	% Marks	Letter Grade Result

Prof. Shivram S. Garje Dean, Science and Technology University of Mumbai

Appendix B

1.	The necessity for starting the course:	M.Sc. (Analytical Chemistry) course is necessary for those who seek to deepen their knowledge, specialize in a particular area, and pursue advanced careers in research, industry, academia, or other chemistry- related fields. It offers numerous opportunities for personal and professional growth, enabling you to make a positive impact on the world through scientific exploration and discovery.
2.	Whether the UGC has recommended the	Yes
	course:	
3.	Whether all the courses have commenced	The course has already commenced from the academic year 1975 and in the academic year
	from the academic year 2023-24	2022-23 it is restructured under NEP 2020
4.	The courses started by the University are	This course is aided / self-financed based on
	self-financed, whether adequate number	the sanction given by University of Mumbai
	of eligible permanent faculties	to affiliated colleges time to time.
	areavailable?	
5.	To give details regarding the duration of	The duration of the program is two years (4 semesters). It is not possible to compress the
	the Course and is it possible to compress	course. Under NEP 2020 students have
	the course?:	option of exit at the end of the first year with PG Diploma in Analytical Chemistry.
6.	The intake capacity of each course and	The intake capacity is variable from college
	no. of admissions given in the current	to college based on sanction received from the University.
	academic year:	
7.	Opportunities of Employability /	M.Sc. (Analytical Chemistry) students have
	Employment available after undertaking	a wide range of employment opportunities across various sectors. The skills and
	these courses:	knowledge acquired during their master's
		program make them well-equipped for diverse roles. Some of the common areas
		where M.Sc. (Analytical Chemistry) students can find employment include; Research and
		Development (R&D), Pharmaceutical
		Industry, Chemical Manufacturing, Environmental and Analytical Chemistry,
<u> </u>		Environnentai and Analytical Chennistry,

Justification for M.Sc. (Analytical Chemistry)

Quality Accurance and Control Materials
Quality Assurance and Control, Materials
Science and Nanotechnology, Teaching and
Academia, Healthcare and Clinical Research
etc. The key to employability for M.Sc.
(Analytical Chemistry) students is to build a
strong resume through internships, research
projects, and networking. Additionally,
staying updated with the latest advancements
in the field and continuously improving their
skills can enhance their competitiveness in
the job market.
